DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Abstract line one "The present invention relates to a" has been changed to: --A--

In the Abstract the term "said" in line 4, twice in line 5, twice in line 7, twice in line 8, and in line 11, all have been changed to: --the--

Allowable Subject Matter

Claims 1-15 are allowed.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: With respect to claims 1 and 6, the prior art fails to teach or render obvious the second circuit element being arranged to clear the predetermined value from the output of the second circuit element a predetermined time period after being triggered, the second circuit output relating to the separation frequency between the first and second clock frequencies of the radar level gauge; with respect to claim 11, the prior art fails to teach or render obvious the second circuit element

Art Unit: 3662

further being arranged to clear the predetermined value from the output of the second circuit element a predetermined time period after being triggered, a third circuit element is arranged that a predetermined value will be transferred to and held at an inverted output of the third circuit element triggered by an inverted output of the first circuit element, the third circuit element further being arranged to clear the predetermined value from the inverted output of the third circuit element a predetermined time period after being triggered, a fourth circuit element is arranged that a predetermined value will be transferred to and held at an inverted output of the fourth circuit element, the fourth circuit element is arranged to clear the value triggered by an inverted output from the third circuit element, the output of the fourth circuit element is arranged to provide an output signal essentially corresponding to the separation frequency between the first and second clock frequencies of the radar level gauge. The prior art teaches a separation frequency detector circuit for a radar level gauge including a first circuit element arranged to receive first and second clock frequencies, and second circuit element arranged such that a predetermined value will be transferred to and held at an output of the second circuit element triggered by the output of the first circuit element. However, none of the prior art either singularly or in combination teaches the claimed system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
